# STUMP JUMP DISK HARROW

The 500 Series from Savannah Global is the perfect machine for heavy plowing in forestry. With the option of having 4 or 5 disks, this implement will cover up to 2,35 meters each pass. The advantages of having a disks plow instead than a standard couleures plow are numerus, first of all, a disk plow will require less pulling force obtaining the same result as a coulter plow. Secondly, the disks will rotate against obstacles reducing applied force to the tractor lifting unit. With this plow, it is possible to work up to 35cm deep in a single pass. With the unique Stump-Jump technology, this machine will work in the toughness conditions with minimal maintenance and minimizing down time. Every disk is independently mounted on an individual arm with pre-carged Hyd cylinders allowing each and every disk to work independently.

## Savannah® 500 Stump Jump Disk Plow Specifications

Model Number	Width of Cut m	Number of Disks	Suggested Horsepower	Weight Per Disk kg	Net Weight lbs (kg)
504	1,8	4	160	687	2750
505	2,35	5	190	920	4600
